YOUNG CONSUMERS FOR EUROPE

"Sustainable planet: turning the tide on plastic pollution"

"The dark side of digitization: environmental impact and pathways to sustainability"

01
Right to repair

- Produce repair parts that can be bought or make parts open source
- Accessibility of parts
- No software that prevents the usage of off-brand parts
- Force companies to give support

02
Encourage to use open software in research, schools, public buildings, etc

03
Increase and actively support scientific research in order to increase consumers' knowledge of e-waste, the digital carbon footprint and obsolescence through software.

04
Strict rules and penalties for selling e-waste

05
Reward the design of long-lasting products and reward well-organised data structures.

06
Force reduction of CO2 emissions and energy usage

- Force companies to be transparent about their energy usage and CO2 emissions
- Force the deletion of obsolete data
- Ban online-only products that don't actually need an internet-connection

07
Transparency of data sheets of products

08
Reduce plastic trash

- Education about sustainability and the ocean in all European schools
- Rewards for companies which have sustainable approaches
- Promotion of reusable take away boxing
- Fees for not bringing their own boxes
- Return scheme for drinking recipients
- Give back money to people who use recyclable materials

09
Certified partnerships
to reduce food waste

- Force supermarkets to offer food at the end of the day
- More waste recipients should be supplied in cities
